HOW DILUTIONS WORK:

The powerful concentration of Amway Home™ products makes them economical to use. This also means that many of them can be diluted before use. To explain how dilution works with Surface care products, we have included the information below. In this guide all dilutions are written as follows:

For example, to mix a 3:1 dilution of cleaning solution in a 500ml bottle

- Add the two parts of the dilution ratio together to see how many parts in total you will need. In this case it will be 3+1=4. Now take 500ml and divide it by this answer: 500÷4=125ml.
- This means you will need 3x125ml water and 1x125ml cleaning product
